0x45.dev

MASTERCLASS · CHEAT SHEET

The new Claude app, on one sheet

All 11 features from the video: what each one does, where to find it, and the catches. **Checked against Anthropic's docs on 29 Oct 2026.**

11 FEATURES | SHORTCUTS | SOURCED

Run your work from one place

FEATURE 1/11

Session rail

Cards on the right of every session: where it runs, Remote Control, context use, connectors, outputs.

How: Show session rail in the session title bar. Settings > Code: **Connect new sessions to Remote Control**, **Keep computer awake while Claude works**.

> Memory files, skills and connectors load into **every** chat. Big bars in the Context card = time to clean up.

FEATURE 2/11

Sections

Group sessions in the sidebar like folders: per project, client or channel.

How: Hover the session list heading > **Group and sort**. Drag sessions between sections.

FEATURE 3/11

Nested sessions

A session starts its own sessions. They sit under it in the sidebar and report back when done. Each is a full chat you can open and steer.

How: Ask Claude to split work into separate sessions, or press **Start** on a task card it suggests.

One boss chat, many workers

FEATURE 4/11

Master session

Anthropic calls it **working across sessions**: a chat can list, read and message your other local sessions, and start or archive them.

How: Pin one chat, then ask: *"What's waiting on me?"* It looks at your **20 most recent** local sessions by default.

FEATURE 5/11

Projects

A long-running main conversation that runs threads in the cloud, with shared instructions, shared memory and an Overview page.

How: Projects in the sidebar (or under More).

> Beta on **Pro and Max**, rolling out with a waitlist. Files go to Anthropic's cloud. Rule of thumb: needs your files and tools → nested sessions; long job while you sleep → project.

FEATURE 6/11

Side chats

Ask a quick question that can read the main chat, without interrupting it. Nothing goes back into the main chat.

How: Type **/btw** or press ⌘ **;** (Ctrl ; on Windows).

> The desktop app does **not** keep side chats after you close it.

Pages, commands and mods

FEATURE 7/11

Split view

Two sessions side by side.

How: Option-click (Alt-click) a session, or right-click > **Open in > Split view**.

FEATURE 8/11

Artifacts

Live pages you share as a link: Docs, Slides (→ PowerPoint), Design, Dashboards (live data), Motion (animation written as code).

How: Settings > Capabilities > **Artifacts that use Claude** lets a page call Claude itself.

> Dashboards: beta on paid plans. Motion: beta on Team and Enterprise. The old claude.ai/design closes on **14 Dec 2026**.

FEATURE 9/11

Slash commands

/output-style how Claude talks · **/doctor** setup check · **/skill-doctor** skill costs · **/advisor** stronger model for big calls · **/rewind** undo · **/recap** one-line summary · **/insights** usage report

How: Type **/** in the message box.

Make the app yours

FEATURE 10/11

Mods

Add-ons that change how the app looks or works: panes, bands, buttons, commands. Describe one and Claude writes it.

How: Ask in a session, e.g. *"make a pane that lists my finished videos with a Post button"*.

> A mod runs with your permissions. Only install ones you trust.

FEATURE 11/11 · SHORTCUTS

⌥ ⌥ (Win: Ctrl Alt Space)	Quick open, from anywhere
⌘ ;	Side chat
⌘ /	Every shortcut
⌘ N	New session
Ctrl Tab	Switch sessions
